

Broadband availability

Fixed-broadband availability for any US address — the share of homes reached by 100/20 Mbps broadband and gigabit, whether fiber and cable are available, and who provides service — for its census block group, tract, and county, from the FCC Broadband Data Collection.

1600 Sample Way, Springfield, USA

Sample County

Broadband (100/20 Mbps) is available to nearly all homes in this neighborhood. Gigabit reaches 97%. Wired options include fiber, cable. 3 fixed providers serve the area.

88th

national percentile

broadband here ranks at or above 88% of US block groups

Availability by geography			
	BLOCK GROUP	TRACT	COUNTY
Homes (serviceable locations)	165	675	123,498
Broadband (100/20 Mbps)	100.0%	99.7%	99.1%
of which wired	98.8%	97.4%	95.2%
Gigabit	97.0%	94.1%	88.6%
Fiber available	Yes	Yes	Yes
Cable available	Yes	Yes	Yes

Percentages are shares of the FCC's Broadband-Serviceable Locations (an exact count). ⚠ marks an area with few homes, where a single location swings the percentage.

Glossary

100/20 Mbps

The FCC's current broadband benchmark: 100 Mbps download / 20 Mbps upload.

Gigabit

1000 Mbps download service — the top consumer tier.

Fiber

Fiber-to-the-home, generally the fastest and most reliable wired service.

Availability reflects locations where a provider reports it can offer service; verify serviceability with the provider. Source: FCC Broadband Data Collection — residential fixed broadband (FCC BDC Dec 2025).
